METAHEALTH INFRA

MetaHealth Infra strengthens development and testing activities in the social and healthcare sector and in health and wellbeing technology in Northern Ostroboth.

The two digital environments being built at the Kontinkangas campus utilise immersive technologies, gamification and artificial intelligence. They offer companies, public service providers and educational institutions new opportunities for developing and testing products and services, as well as for education and collaboration.

More information about the projects:

MetaHealth Infra (investment section)

MetaHealth Infra Development (MHID)

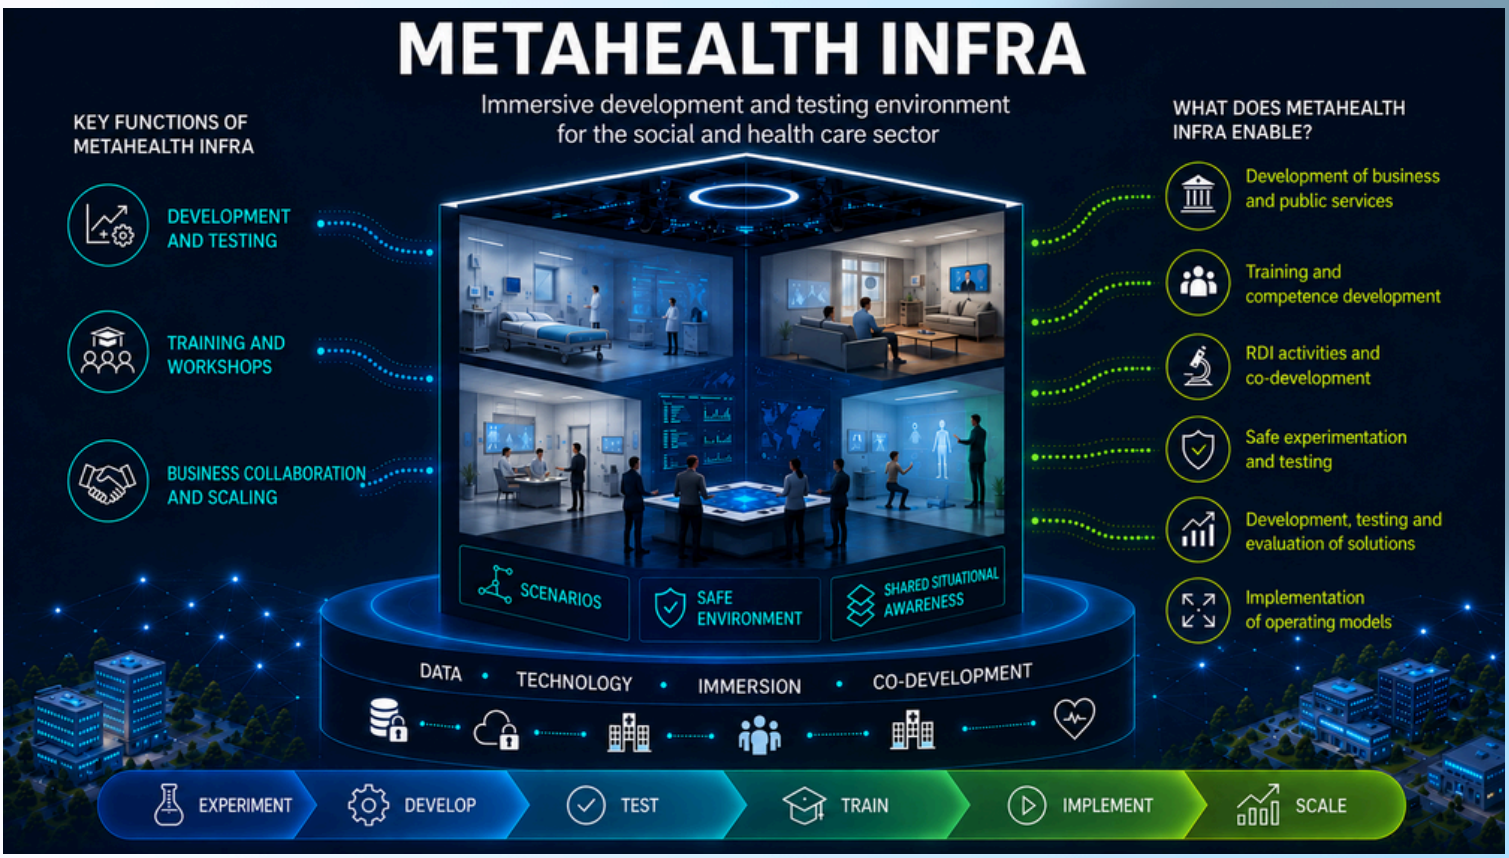

Funded by the European Union

POHJOIS-POHJANMAA COUNCIL OF OULU REGION

OAMK OULU UNIVERSITY OF APPLIED SCIENCES

MULTISENSORY EXPERIENCE AND INTERACTIVITY

A flexible environment supporting remote access enables the creation of multisensory and interactive scenarios. Realistic situations allow new solutions to be tested, demonstrated and evaluated safely before implementation.

METAHEALTH BUSINESS COLLABORATION MODEL FOR TESTING AND DEVELOPMENT

The projects will develop a business collaboration model that enables companies to test their products in cooperation with Oulu University of Applied Sciences. The model supports further product development, implementation and scaling while strengthening companies' competitiveness.
